

SO-SFP-L160D-Cxx

SFP, 1.25 Gbps GigE, CWDM, SM/MM, DDM, 37dB, 160km

OVERVIEW

The SO-SFP-L160D-CXX fiber optical SFP+ (Small Form Pluggable) transceivers include an APD diode and uncooled CWDM DFB transmitter. The modules operate at multiple data-rates up to 1.25 Gbps and supports protocols like Gigabit Ethernet 1000BASE, Fibre Channel 1G. The CWDM modules operate at nominal Coarse Wavelength Division Multiplexing (CWDM) wavelengths on the 20nm grid as defined in the ITU-T 694.2 standard. There are eighteen center wavelengths available from 1270nm to 1610nm, with each step 20nm. The module has a duplex LC optical interface and all mechanical characteristics are compliant with the current SFP+ specification (SFF-8431 and SFF-8432). All SFP modules fulfill the content of the serial EEPROM described in the SFP MSA, Appendix B4, table 3.1, at base data fields (defined as addresses 0 to 63) and extended data fields (defined as addresses 64 to 95). The nominal transmitter output wavelength is stated at the reserved addresses 60-61 according to SFF document SFF-8472 rev 10.4, "Digital Diagnostics Monitoring Interface". Wavelengths stated in the specification are measured in vacuum. All requirements in this specification are valid throughout the specified lifetime and operational environmental temperature range unless otherwise stated. The transceiver modules are compliant to RoHS-6/6.
